---

purchased a recovery and/or recovery tool from a company called Inland Technologies that is not available on the internet. The recovery tool will not connect to the CD-ROM drive to recover any files but will allow a windows 7 operating system to be installed on it. The problem with this is that the device is not recognised when plugged in to the usb port so that I can install a windows OS on it, only the CD-ROM drive is recognised as a usb device and can be used to connect to the internet. The CD-

---

ROM drive has only one connection it connects to the mother board so it doesn't need a usb plug to be connected to in order to use the internet
